Online version: [manual.html](#) on the Evabob website. For what each feature is for, see "What Evabob makes possible".

# Before you start

Evabob is a testnet preview. Everything in this manual works with free test dollars that have no value, so you can try every feature without risking real money.

You need:

- The Evabob app on an Android phone or iPhone.
- An email address you can open on that phone. You sign in with a code sent there.
- A few minutes to set a PIN. Choose one you'll remember and nobody else can guess.

## Test money only

Don't send real money to an Evabob address. The app runs on test networks, and anything sent from a real network won't arrive.

# Sign in

1

## Enter your email

Open Evabob, type your email address and tap Send me a code.

2

## Open the email

You'll get six digits. Look in your spam folder if they don't arrive within a minute.

3

## Enter the code

Type the six digits. If they expired, tap Send a new code.

There's no password to remember. Each time you sign in, Evabob sends a fresh code.

# Choose your @username

Your @username is how people find and pay you. Evabob suggests one; you can keep it or type your own.

- Use 3 to 24 letters, numbers or underscores.

- It isn't your display name. Your name and photo are set separately in Profile.
- You can change your @username once every three months. People can always pay you by email too.

## Set up your wallet and PIN

Next, Evabob creates your wallet. It's yours: payments leave it only when you approve them with your PIN.

1

### Tap Create wallet

On the Set up your wallet screen.

2

### Choose a PIN

Enter it, then enter it again to confirm. Evabob never sees it and never asks you for it.

3

### Continue to Evabob

Your wallet is ready on three networks: Arc (your main account), Ethereum and Base.

### Keep your PIN to yourself

Evabob will never ask for your PIN, recovery phrase, private key or API key, by message, email or phone.

If you skip this step, Profile shows your wallet as Not linked yet. Open

[Profile > Set up wallet](#) to finish.

# Get test dollars from the Circle Faucet

The Circle Faucet gives out free test USDC. It's the quickest way to put money in your Evabob balance while the app is on testnet.

1

## Copy your Arc address

In Evabob, tap **Wallet**, choose Arc (your main account), then Get paid, and copy the address. You can also copy it from the Wallet row in Profile.

2

## Open the faucet

Go to [faucet.circle.com](https://faucet.circle.com) (<https://faucet.circle.com>) in your phone or computer's browser.

3

## Choose USDC and Arc Testnet

Pick USDC as the token and Arc Testnet as the network.

4

## Paste your address and send

Paste the address you copied and press the send button. The faucet sends a fixed amount and limits how often you can ask.

5

## Watch it arrive

Back in Evabob, the money appears in your balance and in Activity, usually within a minute. With the app open, you'll hear a short chime.

### Want euros too?

Request EURC on Arc Testnet from the same faucet to try Convert with euros. If you picked a different network by mistake, the money shows under that network in Wallet, and you can move it to Arc with Move money.

# Find your way around

## The bar at the bottom

| Tab                 | What it's for                                                    |
|---------------------|------------------------------------------------------------------|
| Home                | Your balance, quick actions and what's on hold                   |
| Chat                | Conversations, request cards and the Evabob Agent                |
| Send (round button) | Opens Send from anywhere                                         |
| Activity            | Every payment and receipt, the moment money moves                |
| Wallet              | Your dollars on each network, with Send, Get paid and Move money |

## The menu

Tap the four-dot button at the top right of Home to open the menu: Request, Convert, Move money, Your GA, Agent wallets, Get paid by agents, Work from agents, Sell with a link, and Circles and collections. Tap your photo to open Profile.

# Send money

1

## Tap Send

On Home, or the round button in the bottom bar.

2

## Choose who it's for

Type a name, @username or email. Saved contacts appear as you type. You can also paste a wallet address.

3

## Enter the amount

Use the keypad. It can add up for you: `120+35` becomes 155. Tap All of it to send your whole balance, or change the currency between dollars and euros.

4

## Add a memo if you like

For example "Rent, March". It's optional.

5

## Check the review screen

You'll see their photo, what they receive and the fee. Read any warning carefully.

6

## Confirm with your PIN

You'll see Sent, and the payment appears in Activity. It usually arrives in about a second.

## The 10-minute pause

The first time you pay someone, the review screen has a switch to wait 10 minutes before it goes, and it starts on. The money is held during a countdown you can cancel. Leave it on unless you know the person well.

## Paying someone who isn't on Evabob

If you send to an email with no account, you'll see They are not on Evabob yet. Tap Hold it for them: they get an email, and the money waits for them for 7 days. If they don't sign up by then, it comes back to you. Until then it shows in Activity as Waiting for them to join.

## Scan to pay

Tap the scan button between Send and Request, point your camera at a payment QR code, and the payee is filled in for you.

## Request money

- 1** Open Request  
From Home, or [Menu > Request](#) .
- 2** Enter the amount and what it's for  
For example "\$40, Logo design".
- 3** Add who pays and a due date (optional)  
If you do, Evabob reminds them the day before, on the day, and three days late.
- 4** Share it  
Tap Share request to send the link, or Show QR code for someone standing next to you.

Follow your requests in request history. You're told when one is paid or becomes overdue.

## Paid by milestone

Switch on Paid by milestone and add 2 to 10 lines in dollars, one per milestone. The payer approves them all with one PIN, and each line is paid to you as you deliver it.

## Chat and pay

- 1** Start a conversation  
Open [Chat](#) , tap + and find someone by @username or email.
- 2** Ask for money  
Tap Ask for money in the conversation to send a request card with the amount and a note.

### 3

## Pay a request you received

Tap Pay on their card and choose how: Pay it all now, Pay half, hold half, or Hold it all.

To decline a request, tap Cancel. The card closes for both of you and the sender is told. You can cancel your own requests the same way. Messages can be copied, and you can send photos from your camera or gallery.

## Ask the Evabob Agent

The Evabob Agent is pinned at the top of your chat list. Ask it anything about your money in your own words:

- "How much can I spend?"
- "Send \$25 to @john for lunch"
- "Is this payment request real?" (paste the link)

When you ask it to move money, it shows a confirmation card with the exact payee and amount. Nothing happens until you tap Confirm and enter your PIN.

## Pay for work safely

When you pay for work with Hold it all or Pay half, hold half, the held money is locked until the work arrives.

### If you're paying

- When the worker marks the job delivered, check it. Tap Release to say the work has arrived and pay them straight away.
- If you do nothing, it's released to them 7 days after delivery.
- Need to stop? Cancel and get it back works instantly before delivery. After delivery, choose why and a person at Evabob reviews both sides; the money stays put until they decide.

### If you're doing the work

- You can see the money is already set aside before you start.
- Mark the job delivered when you're done, then wait for release.

- If there's a review, tap Add your side and include links or photos of the work.

## Sell with a link

- 1** Open Sell with a link  
[Menu > Sell with a link](#) .
- 2** Describe the item  
What you're selling (for example "Ankara dress, size 12"), details such as colour or size, and the price.
- 3** Set a delivery window  
How many days you need to deliver.
- 4** Share the link  
The link is copied. Paste it in a chat, a post or your bio, or tap Show QR code.

Buyers see your track record and pay into a hold. Mark each order delivered when it's on its way; the money reaches you when the buyer confirms, or 7 days after you mark it delivered. If you haven't marked an order delivered within your window, the buyer gets their money back.

## Circles and collections

### Start a money circle

- 1** Open Circles and collections  
[Menu > Circles and collections](#) , then New money circle.
- 2** Name it and set the amount  
Everyone puts in at least \$1 a round. Choose how often it runs, for example every 2 weeks.
- 3** Add people in payout order  
Up to 20 people. The first person on the list is paid first.

4

#### Start the circle

Everyone else gets an invite. It starts when all of them have joined.

Nobody holds the money, not even you. If someone misses a round, their turn moves to the end and they're caught up automatically when their balance allows.

### Start a collection

Tap New collection, say what it's for, and set a target (at least \$1) and a deadline. It's paid out as soon as the target is reached. If the deadline passes short, everyone is refunded automatically.

## Convert and move money

### Convert dollars and euros

Open [Menu > Convert](#), choose which currency you're spending, enter the amount, and check You receive and the fee before confirming with your PIN.

### Move money between networks

1

#### Open Move money

[Menu > Move money](#), or tap a network in Wallet.

2

#### Choose where it's going

Arc, Ethereum or Base. It goes to your own wallet on that network unless you change the address.

3

#### Enter the amount and confirm

You'll see what arrives after fees. Leave a little on Arc to cover the network cost.

4

#### Follow it

Sending, then On the way, then Done. It can take a few minutes.

# Activity and receipts

**Activity** lists every payment. Use the filters at the top: All, Money in, Money out and On hold. Tap a row that says On hold, tap to continue to finish or cancel it.

Tap any payment to open its receipt: who, how much, when, the fee and a reference. From there you can:

- Download the receipt to your phone.
- Share a "Paid" link and QR code. Whoever opens it sees the payment re-checked live on the network, so a seller can confirm it themselves. Your memo is never shown.
- Open Details for the technical record, if you need it.

## Agent wallets

An agent wallet lets software you use (a bot, a script, an AI assistant) pay for things by itself without touching your main balance. This is an advanced feature; skip it if you don't need it.

1

### Create an agent wallet

**Menu > Agent wallets** , then Create agent wallet.

2

### Copy the key

Give the key to your software. It's shown once and isn't stored, so copy it now. If you lose it, rotate it.

3

### Fund it

Tap Fund with PIN and move money from your balance.

4

### Set an allowance

An amount, a time window, and what it may buy. Above your limit it can pay silently, ask you first, or be refused.

Freeze all stops every agent at once. Revoking a key means that software can no longer spend. Withdrawals always go back to your own wallet.

# Security settings

Open Profile by tapping your photo on Home.

## App lock

Require your PIN or fingerprint to open the app.

## Fingerprint or Face ID

Approve payments with your fingerprint or face instead of typing your PIN each time. Your PIN still works.

## Family check

Mark contacts as family and set an amount (default \$100). Paying them more than that needs a code emailed to you first.

## Change app PIN

Change the PIN that opens the app, from the App lock setting.

## Why family check matters

Scammers can copy a voice from a few seconds of video and call pretending to be a relative in trouble. With family check on, a big payment to family needs a code from your own email, which a scammer on the phone can't see. If someone asks you to read out that code, stop.

## Read warnings on the review screen

Before you pay, Evabob checks who the payee really is. Take extra care if you see a warning that an address isn't an Evabob account, or that it only looks like one you've paid before. Look-alike addresses are a common trick.

# Troubleshooting

---

I used the faucet but my balance is still \$0

Check that you chose Arc Testnet on the faucet and pasted the address from Wallet > Arc > Get paid. Give it a minute, then pull down on Activity to refresh. If you picked Ethereum or Base, the money is under that network in Wallet; use Move money to bring it to Arc.

---

My wallet says "Not linked yet"

Wallet setup didn't finish. Open [Profile > Set up wallet](#) and complete the PIN steps.

---

I didn't get my sign-in code

Check your spam folder, make sure the email is spelled correctly, then tap Send a new code. Only the newest code works.

---

It says "Not enough money"

The amount plus the fee is more than your balance. Lower the amount, or tap All of it to send everything you can.

---

"The payment did not go through"

If the message adds Nothing left your wallet, your money is safe and you can try again. Otherwise, check Activity before trying again so you don't pay twice.

---

Why is my money "On hold"?

Money is on hold when it has left your balance but hasn't reached anyone yet: it's waiting for someone to join, for work to be delivered, or for a 10-minute pause to end. Tap it in Activity to see where it stands or to cancel.

---

Evabob asked me to sign in again

Your sign-in ended, so Evabob needs to check it's you. Enter the new code from your email.

---

A payment was refused after several in a row

Evabob limits how many payments can be made in a minute to protect your account. Wait a minute and try again.

---

Someone asked for my PIN or code

Don't share it. Evabob never asks for your PIN, recovery phrase, private key or API key. Contact support from a device you control.

---

## Getting help

- Ask the Evabob Agent in Chat about a payment, your balance, moving money, or anything that looks unfamiliar.
- Lost your phone? For account recovery, contact support from a device you still control.
- Deleting your account is handled by support while your wallet still has money in it.
- Want to know more? Read [What Evabob makes possible](#) (docs.html) for how each feature works.
